
veined brush aluminium profile

The brushing extrusion aluminum profile is a linear pattern in the surface of the aluminum sheet (physical treatment) by mechanical friction or extrusion.

According to the needs of decoration, it can be made of straight lines, cross lines, random lines, threads, ripples and whirling lines.

It is widely used in wire drawing aluminium plastic panel, fireproof board, aluminum photo frame, integrated ceiling, fine cabinet, fine doors and windows, stickers, signs, lighting, indoor and outdoor decoration, household appliances, bags, gifts, furniture, electronic consumer goods and other fields.
